

Unlocking High-APY Bitcoin Yield and Cross-Chain Swaps

The Ethereum ecosystem, with a capitalization of \$300B, offers many yield opportunities. Unfortunately, it's different for Bitcoin. Despite its \$2T capitalization (over 7 times larger in value), no DEX has yet introduced a sustainable, high-APY yield for Bitcoin. Now, for the first time, there is a solution addressing this gap.

The Solution

BitSwapp offers a **single-platform solution** for seamless cross-chain swaps of major native coins and wrapped tokens, along with high-APY liquidity pooling.

As the main DEX of the Bridgeless ecosystem, BitSwapp supports swap pairs for all tokens launched on Bridgeless, creating deep liquidity across the network.

In essence, BitSwapp offers the best features of cross-chain swapping - but goes further by delivering the **highest-yielding APY** opportunities on Bitcoin through its Lossless Pools - single-asset pools designed to eliminate impermanent loss. This creates an innovative opportunity for **all Bitcoin holders** to access competitive, premium yields and real utility.

Road map

The BitSwapp product will begin rolling out initial swap pairs and yield opportunities in Q2 2025.

DONE

### Development

- Uniswap fork
- X Assets implementation
- Bridgeless integration
- Liquidity pool creation

WE ARE HERE

### Initial Launch

- Initial swap pairs for Bridgeless ecosystem tokens
- Launch of user-enabled liquidity providing
- Addition of BTC swap pairs
- Launch of the highest-yield Bitcoin pools

### Next

- Wallet provider onboarding (Bitcoin.com and other major wallets)
- Scaling of cross-chain swaps
- \$SWAP TGE
- \$SWAP staking
- Transaction bundler implementation

#### Revenue

Revenue from swap fees is distributed between liquidity providers, creating strong mutual incentives for product use and liquidity provision. **60% of the revenue** is shared with liquidity providers, while the remaining 40% is allocated to token buybacks and ecosystem grants.

#### Bitcoin Yield

Bitcoin is the most widely held and recognized cryptocurrency, with over **100 million** global holders and a market capitalization exceeding \$2 trillion. Despite this scale, yield opportunities for BTC have historically been limited, fragmented, or unsustainable. BitSwapp transforms this landscape by introducing high-APY Bitcoin yield pools within a seamless cross-chain DEX experience, unlocking passive income opportunity for all Bitcoin holders.

#### Mass Adoption Potential

BitSwapp is a truly unique and desirable product. With its plug-in design, it can be integrated into any wallet, delivering wallet providers new monetization opportunities and enabling their users to access cross-chain swaps and real Bitcoin yield - all from within the tools they already use.

BitSwapp targets the entire crypto space and wallet providers with a combined user base of over 400 million active users (*based on the latest data from May 2025*). This plug-in, incentivized design positions BitSwapp for rapid mass adoption.
